1
Channel / input — authentication, injection and jailbreak detection
2
Context / memory — source trust, ACL, provenance, poisoning
3
Model / output — approved route, schema, content safety, DLP
4
Agent / workflow — budgets, deadlines, loop and fan-out caps
5
Identity / policy — subject and workload identity, RBAC/ABAC
6
Tools / effects — the effect boundary that cannot be skipped
7
Execution / egress — sandbox, secrets isolation, destination policy
8
Supply chain / release — locks, SBOM, signatures, provenance
9
Detection / response — monitoring, containment, revocation
