I
Foundations
bounded reasoning, typed tools, runtime
II
Architecture and knowledge
planes, contracts, governed knowledge
III
Developer platform
SDK, Skills, delivery lifecycle
IV
Patterns and anti-patterns
what to build, and what to stop building
V
Multi-agent and integration
collaboration, MCP, A2A, model control
VI
Security and guardrails
identity, tools, effects, containment
VII
Observability and evaluation
traces, evidence, continuous learning
VIII
Governance and operations
accountability, release, cost, reliability
